

# EDGE-COPD

a collaboration of  
engineers, patients, doctors, nurses

---

Carmelo Velardo

@2dvisio

UCL - TechSharing Seminar Series

22<sup>nd</sup> May 2017

UNIVERSITY OF  
**OXFORD**

**Institute of Biomedical Engineering**  
**Department of Engineering Science – University of Oxford**

# Motivations

- COPD is the fourth most common cause of death globally and predicted to be the third by 2030
- COPD care costed:
  - UK £800M (half is hospital-based care)
  - EU over 38.6B Euros
  - US \$49.9B
  - global costs are estimated at \$141 billion.
- Technology has yet to prove its benefit to patients with chronic conditions

Adeloye, D. et al., 2015. Global and regional estimates of COPD prevalence: Systematic review and meta-analysis. Journal of global health

# EDGE-COPD team

## Mobile Health group:

Prof Gari Clifford

Dr Oliver Gibson

Dr Syed Ahmar Shah

**Prof Lionel Tarassenko**

Dr Andreas Triantafyllidis

Dr Carmelo Velardo

## Clinical collaborators:

**Prof Andrew Farmer**

Dr Maxine Hardinge

Prof Carl Heneghan

Ms Linda Heritage

Dr Jonathan Price

Ms Heather Rutter

Dr Veronika Williams

Department  
of Health

**welcome**trust

# Design for the ageing population

A dedicated “telehealth box” is a reminder of illness

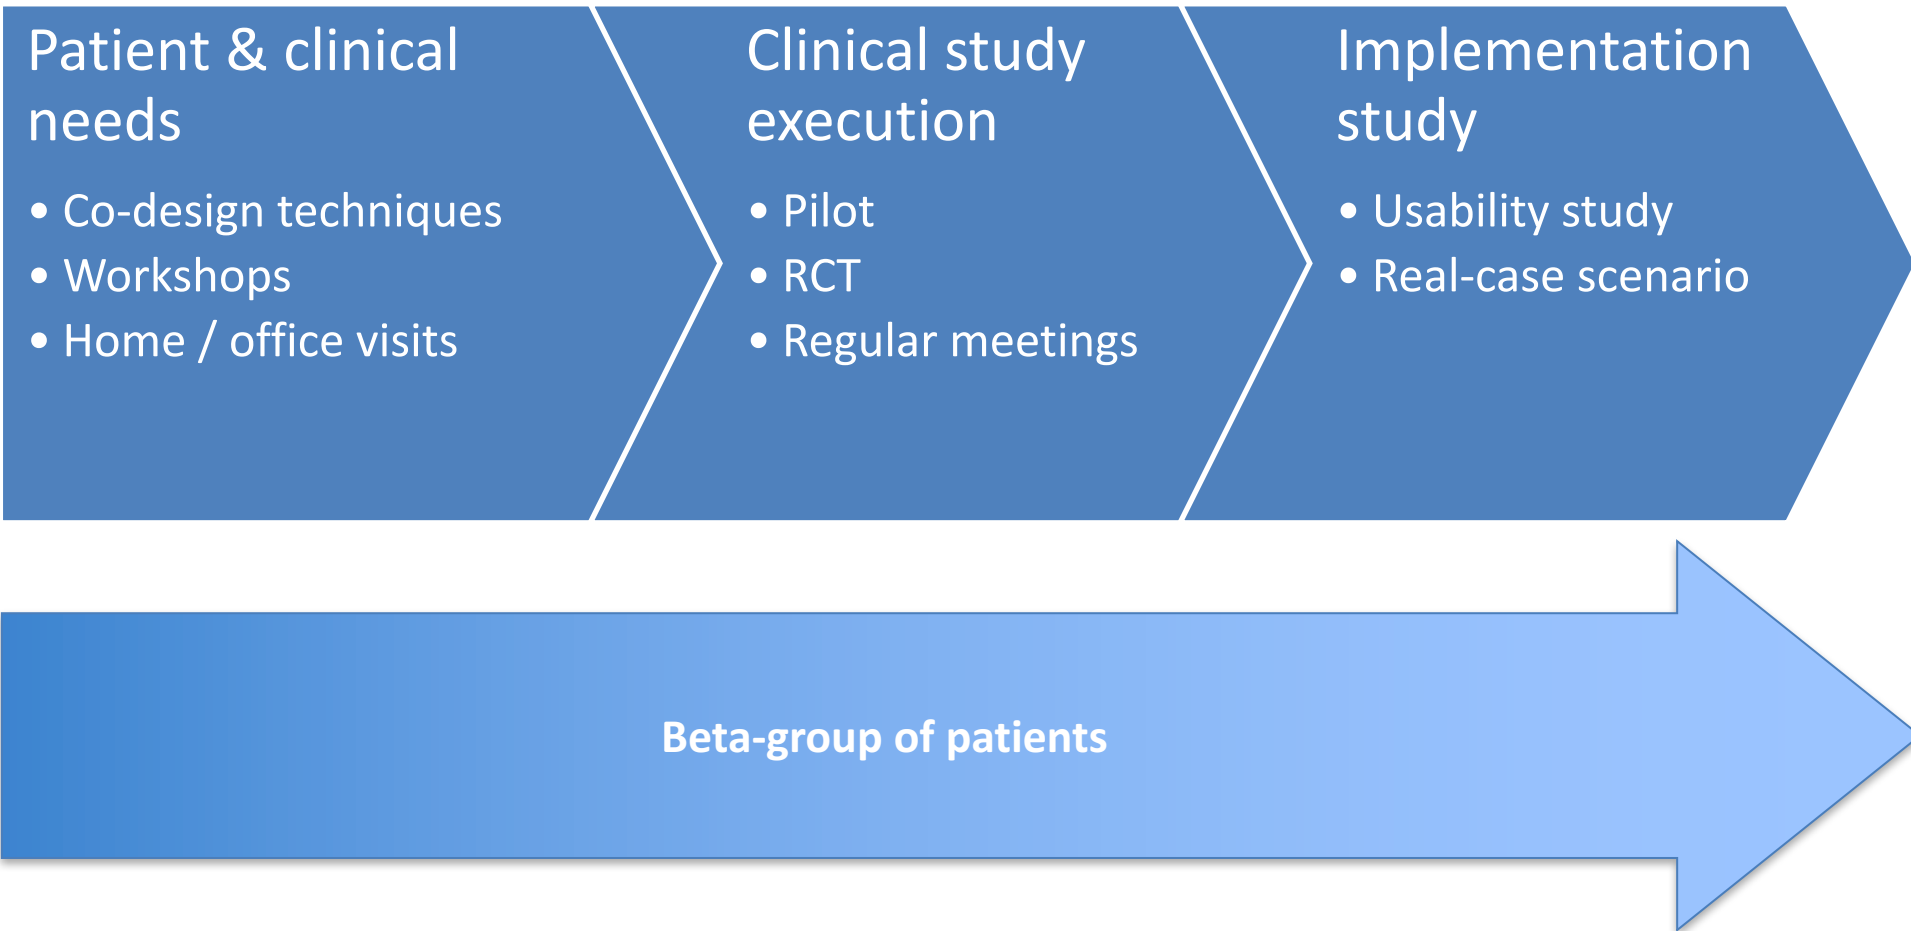

Self-monitoring data (recorded by non-experts) is often unreliable

A successful digital health strategy needs a *self-management* component, tailored to that individual.

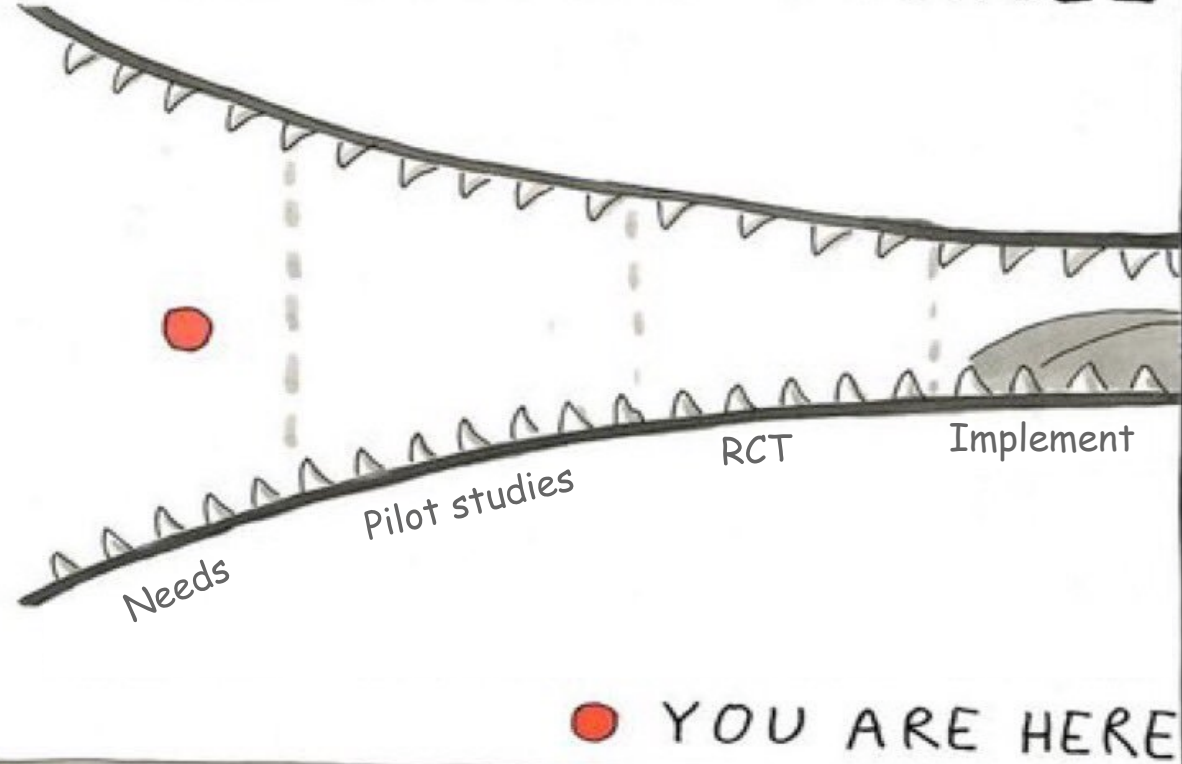

Remote monitoring on its own is not sufficient.  
Patients must be given help to interpret their data.

# Project development

# INNOVATION FUNNEL

● YOU ARE HERE

# EDGE

for better care

- Home based patient monitoring for COPD
- Unassisted patients self-manage their condition
- While we predict deterioration using their daily data recordings

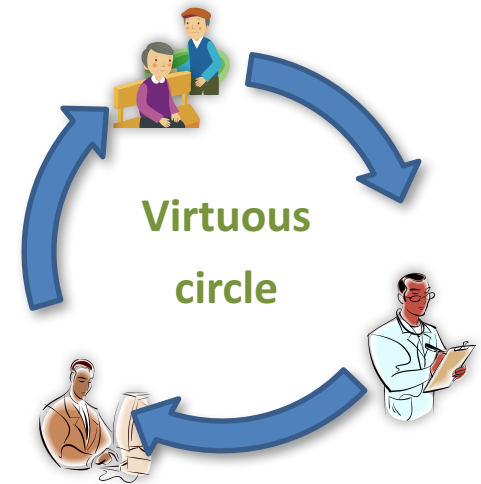

Designed for / with ...

Doctors

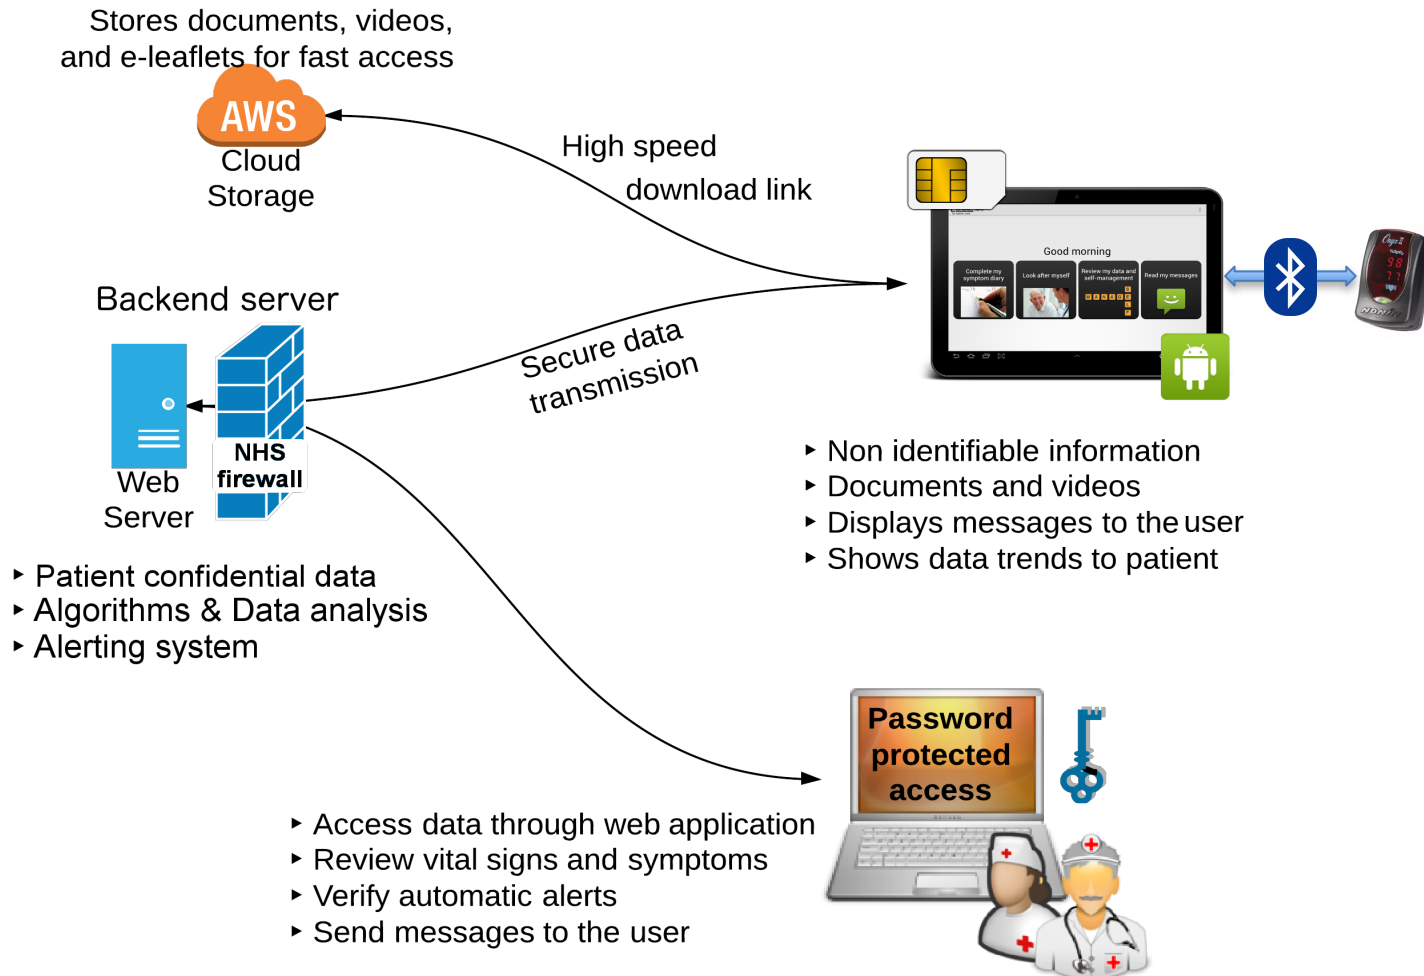

Engineers

Patients

✓ B 4 [Synch] <small>(today) Healer Rutter: Intermittent nonin data, message sent asking pt to change nonin batteries</small>						GAD PHQ
✓ B 8 [Synch] <small>(today) Healer Rutter: Continues with raised cumulative score, Monitor</small>			1			GAD PHQ
✓ B 10 <small>(today) Healer Rutter: PC next week if continues with Nil data</small>	32	32				GAD PHQ
✓ B 9 <small>(today) Healer Rutter: Raised heart rate and cumulative score for 1 day, Monitor</small>			2			GAD PHQ

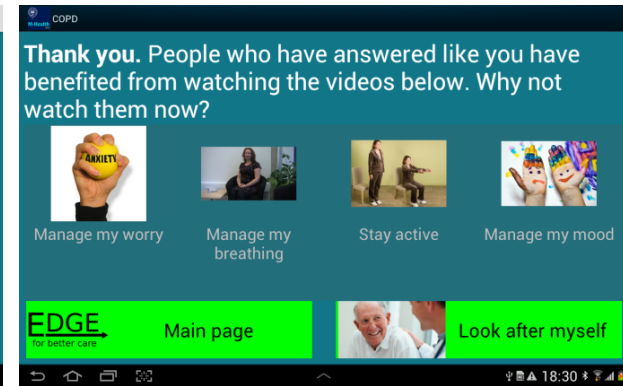

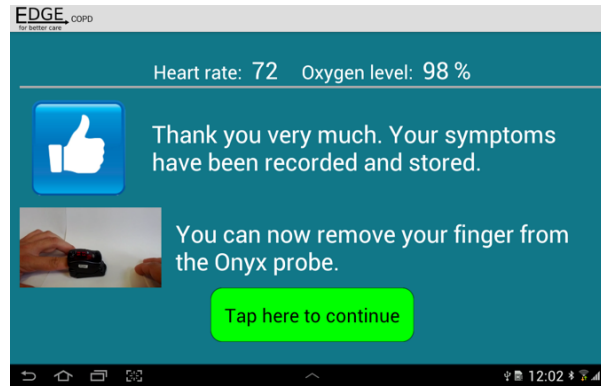

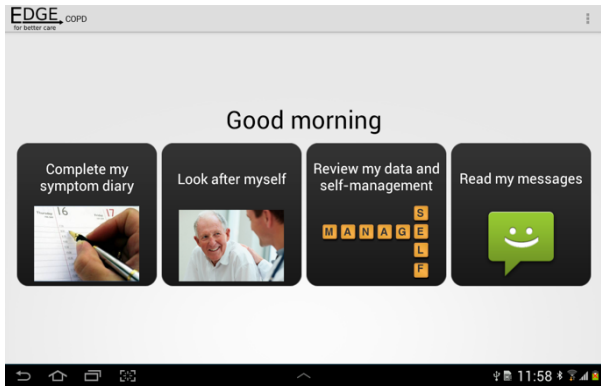

Velardo, C. et al., 2017. *Digital health system for personalised COPD long-term management.*  
*BMC Medical Informatics and Decision Making*

- Wireless-enabled tablets with large icons (no keyboard)
- Smart Bluetooth sensors for *reliable* physiological data
- Patients given help to interpret their data
- Tailored *self-management* component
- Machine learning for personalised alerting

Velardo, C. et al., 2017. *Digital health system for personalised COPD long-term management.*  
*BMC Medical Informatics and Decision Making*

- 165-patient RCT
- Overwhelming acceptance of technology (ease of use, perceived relevance and usefulness of feedback)
- Average usage: 6 times a week
- Fewer contacts with GPs (4 vs 5.5,  $p = 0.06$ ) and Practice Nurses (1.5 vs 2.5,  $p = 0.03$ )
- 20% reduction in numbers of hospital admissions

Williams, V. et al., 2014. Using a mobile health application to support self-management in COPD: a qualitative study. *British Journal of General Practice*

Farmer, A. et al., 2017. Self-Management Support Using a Digital Health System Compared With Usual Care for Chronic Obstructive Pulmonary Disease: Randomized Controlled Trial. *Journal of medical Internet research*

# Challenges from the engineer perspective

- Requirements are always changing / being updated
- Understanding the needs of patients
- Understanding the need of clinicians
- Communicate and express challenges / ideas / solutions

# WHAT WORKED vs. IMPROVEMENTS

## ✓ Patient involvement

- Beta patient
- Home visits (nurse + engineer)

## ✓ Strong multidisciplinary collaboration

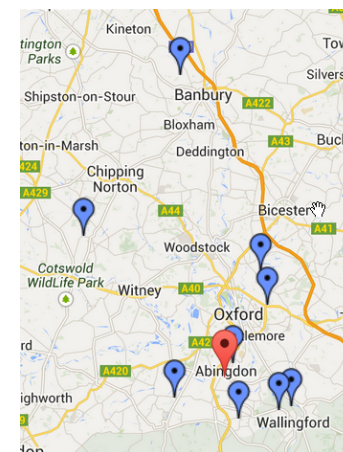

- Weekly / Monthly / Bi-yearly meetings

## ✓ Approach to new ideas

- Design → Discuss with Beta patients → Apply → Feedback → Repeat

## 🤔 We focussed on patients and had to re-focus on professionals

- Usability study (not by design) organised at the end of the RCT

THANK YOU
